Working Experience

Associate Consultant, QBAlytix (November 2025 – present)

QBAlytix, a preeminent Software Value Plus IBM partner, provides Performance Management solutions including Forecasting & Budgeting, Planning, Reporting, Consolidation, Advance Analytics and Business Intelligence solutions that provides competitive advantages to its clients by enabling them to analyze their data faster and better.

Projects :

- Indofood Fortuna Makmur (Dec 2025 – May 2026)
Develop websheet, TI process, and rule for its budgeting
- Project 2

Data Analyst, Anugrah Argon Medica, Argon Group (January 2025 – October 2025)

Data Analyst, Argon Group (November 2022 – December 2024)

Argon Group is a group of healthcare companies. Its business included distribution (PT Anugrah Argon Medica and Dynamic Argon Co., Ltd), marketing (PT Djembatan Dua), and manufacturing (PT Deca Metric Medica). Argon Group also concern about its technology development to support their business in order to keep and improve their services to their customers and stakeholders.

Responsibilities :

- Develop and improve data reports and dashboards using Qlikview.
- Create ETL process and automate daily jobs using Talend.
- Develop data uploader job for users to support their reports.
- Support daily tasks (maintaining dashboards, supporting user requests, troubleshooting problem).

Projects :

- Customer Geo-Tagging*. A big view about all customers across Indonesia and their position based on their geography coordinate. The view helps the business departments to do analysis about what programs are needed to cover the problems related to the customers' insight.
- Dashboard for Executive*. A quick view about the company current conditions is always needed by Board of Directors for determining a future strategic plan. The dashboard presents information from all departments' activities such as business, supply chain, finance, CRM, and HR. It also helps the higher executives to do pitching about the company to future partners.
- Warehouse Inventory Occupancy Forecasting*. Occupancy is designed in order to evaluate the available capacity in a warehouse. It helps the Supply Chain Team to make decisions about what and how many products will be replenished in a warehouse. On the other hand, the occupancy forecasting gives a prediction of warehouse condition to higher level manager to decide whether it needs an expansion or not.
- Financial Reporting : Accounting Balance Sheet and Profit Loss*. In order to evaluate the company growth, Financial Team need to evaluate the company financial statement. Automate this financial

reporting helps them accelerate the monthly company profit (or loss) report making from days to hours.
